## Overview

### 1 Overview

#### 1.1 Functions

The module MU110-24.1TD is a 1-channel input module for resistor bridges (strain gauge). The module enables the direct connection of a resistor measurement bridge.

The module provides following functions:

- module control and parametrization via Modbus network
- RS485 network diagnostic
- sensor error indication
- Slave in the RS485 network.

The module is to be configured using 'M110 Configurator' software (included on CD) via RS485-USB interface adapter IC4 (not included). The latest version of the configuration software is available for download on [www.akytec.de](http://www.akytec.de).

#### 1.2 RS485 network

I/O modules of series Mx110 use the common standard RS485 for data exchange. Serial interface RS485 enables communication via two-wired line in half-duplex mode. The module supports the Modbus-RTU and Modbus-ASCII protocols with automatic protocol detection.

The network consists of a Master device and can contain up to 32 Slave devices. Maximum length is 1200 m. The number of Slave devices and network length can be increased using RS485 interface repeater.

Devices are connected to a network according to linear (bus) topology. It means that the line goes from the first device to the second one, from the second one to the third one, etc. Star connection and spur lines are not allowed.

Line reflections always occur at each of the 2 ends of the bus (the first and the last node). The higher the data transmission rate, the stronger they are. A terminating resistor is needed to minimize reflections. Line termination may be a 150 ohms value (0.5 W) resistor.

All modules can be used as Slave devices only. Master device can be PLC, computer with SCADA software or control panel.

## Specifications

### 2 Specifications

Table 2.1 General data

Power supply	24 (20...28) V DC	
Power consumption, max.	5 W	
Measuring channels	1	
Connection circuit	4- or 6-wire	
Bridge resistance	87...1000 ohm *	
Excitation voltage	2.5 V AC/DC ± 5%	
Warm-up time, max.	20 min	
ADC resolution **	24 bit	
RS485 interface	Connection	D+, D-
	Protocols	Modbus RTU/ASCII, akYtec
	Baud rate	2.4...115.2 kbit/s
	Data bits	7, 8
	Parity	none, even, odd
	Stop bits	1, 2
Dimensions	63 x 110 x 75 mm	
Weight	approx. 300 g	
Material	plastic	

\* Four 350 ohm resistance bridges can be connected in parallel

\*\* For measuring channel accuracy depending on strain gauge sensitivity see Table 2.2

Table 2.2 Measuring channel accuracy depending on the strain gauge rated output

Strain gauge rated output, mV/V	Measuring range, mV	Resolution, µV	Basic accuracy, % FS
1	-4.0...+4.0	1.5	± 0.05
2	-7.5...+7.5	1.5	
4	-15...+15	1.5	
8	-35...+35	1.5	
16	-70...+70	2.0	
32	-140...+140	2.0	
64	-300...+300	3.5	

\* Temperature drift within 10°C deviation from (20 ± 5)°C is not greater than the basic accuracy

Table 2.3 Maximum refresh interval depending on sampling frequency

Sampling frequency, Hz	Refresh interval, ms	
	DC excitation voltage	AC excitation voltage
8.197	125	350
16.39	65	230
19.61	54	210
24.27	45	190
25.77	41	185
34.25	32	166
42.37	26	154
44.64	24	150
50.51	22	146
69.44	16	135

## Specifications

Sampling frequency, Hz	Refresh interval, ms	
	DC excitation voltage	AC excitation voltage
144.9	8	120
257.7	4.3	115
409.8	3	112
588.2	2.1	110

Table 2.4 Galvanic isolation

From each group to chassis	3.0 kV
Power supply to measuring circuits	1.8 kV
Power supply to RS485 interface	1.5 kV
RS485 interface to measuring circuits	0.75 kV

### 2.1 Environmental conditions

The following environment conditions must be met:

- clean, dry and controlled environment, low dust level
- closed non-hazardous areas, free of corrosive or flammable gases

Table 2.5

Condition	Permissible range
Ambient temperature	-20...+55 °C
Transportation and storage	-25...+55 °C
Relative humidity	up to 95% (at +35°C, non-condensing)
IP Code	Enclosure IP20, terminals IP10
Altitude	up to 2000 m above sea level

## Safety

### 3 Safety

Explanation of the symbols and keywords used:

**DANGER** indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

**WARNING** indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

**CAUTION** indicates a potentially hazardous situation which, if not avoided, could result in minor or moderate injury

**NOTICE** indicates a potentially harmful situation which, if not avoided, may result in damage of the product itself or of adjacent objects.

#### Intended use

The device has been designed and built solely for the intended use described in this guide, and may only be used accordingly. The technical specifications contained in this guide must be observed.

The module may be operated only in properly installed condition.

#### Improper use

Any other use is considered improper. Especially to note:

- This device should not be used for medical devices which receive, control or otherwise affect human life or physical health.
- The device should not be used in an explosive environment.
- The device should not be used in an atmosphere with chemically active substance.

## Design

### 4 Design

- Enclosure plastic, grey, for DIN-rail or wall mounting
- Terminal blocks 2 plug-in terminal blocks with 24 screw terminals
- "POWER" LED power supply indicator
- "RS-485" LED flashes at data exchange over serial port
- "SENSOR" LED lights if sensor break or measuring channel overload

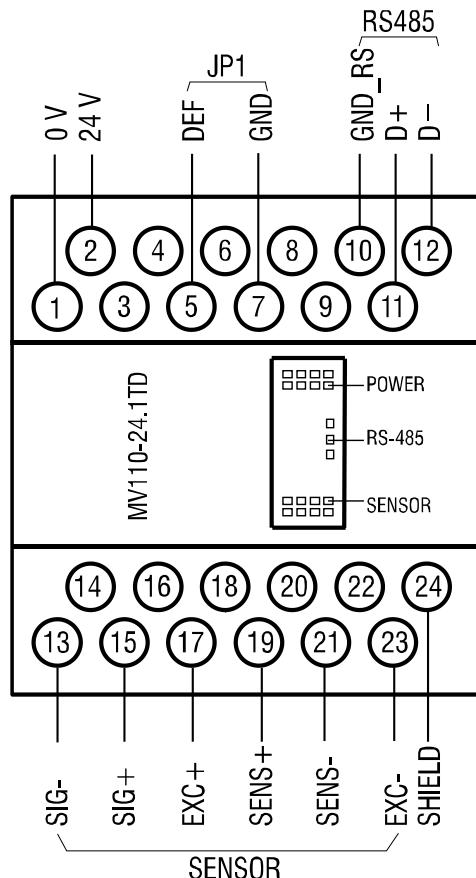

Fig. 4.1

## Installation

### 5 Installation

**CAUTION**

#### *Improper installation*

***Improper installation can cause serious or minor injuries or damage the device.  
Installation must be performed only by fully qualified personnel.***

- The module is intended to be mounted in a cabinet on DIN-rail or on the wall. For the dimension drawings see Appendix A.
- Install the module in a cabinet with clean, dry and controlled environment. For further details see 2.1.
- The module is designed for natural convection cooling. It should be taken into account when choosing the installation site.

#### 5.1 Wiring

##### *Dangerous voltage*

***Electric shock could kill or seriously injure.***

***All electrical connections must be performed by a fully qualified electrician.***

***Ensure that the mains voltage matches the voltage marked on the nameplate!***

***Ensure that the device is provided with its own power supply line and electric fuse!***

**DANGER**

**CAUTION**

***Switch on the power supply only after the wiring of the device has been completely performed.***

- The electrical connections are shown in Fig. 4.1 and the terminal assignments in Table 5.1.
- The inputs should be wired in accordance with Fig. 5.1, 5.2.
- Connect the power supply to the terminals 24V / 0V.
- The maximum conductor cross-section for power supply is 1.5 mm<sup>2</sup>.

**NOTICE**

***Signal cables should be routed separately or screened from the supply cables. Only a shielded cable may be used for signal lines.***

- Connect the RS485 lines to terminals D+ and D-.
- Twisted pair cable should be used for the connection to RS485 interface. Maximal cable length is 1200 m.

*Table 5.1 Terminal assignments*

No	Designation	Description	No	Designation	Description
1	0 V	Power supply	13	SIG-	Signal -
2	24 V	Power supply	14	NC	not connected
3	NC	not connected	15	SIG+	Signal +
4	NC	not connected	16	NC	not connected
5	DEF	Default settings	17	EXC+	Excitation voltage +
6	NC	not connected	18	NC	not connected
7	GND	Common ground	19	SEMS+	Sensor feedback +
8	NC	not connected	20	NC	not connected
9	NC	not connected	21	SENS-	Sensor feedback -
10	GND_RS	RS485 ground	22	NC	not connected
11	D+	RS485 D+	23	EXC-	Excitation voltage -
12	D-	RS485 D-	24	SHIELD	Sensor shield

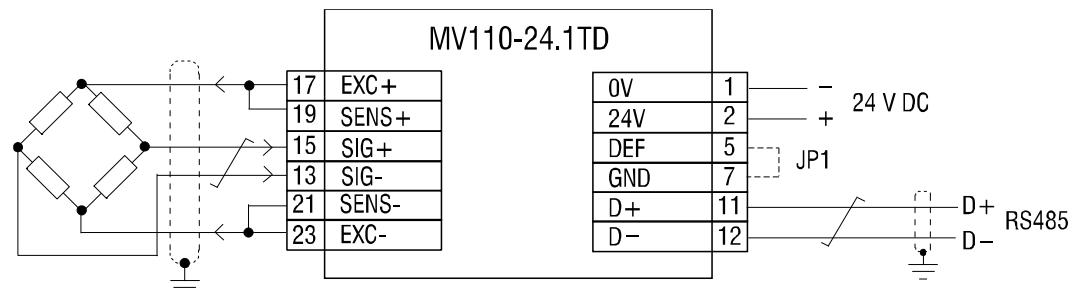

Fig. 5.1 4-wire connection

4-wire sensor connection is used when the cable length is less than 2 m. The terminals EXC (+/-) and SENS (+/-) should be bridged on the terminal block, as shown in Fig. 5.1.

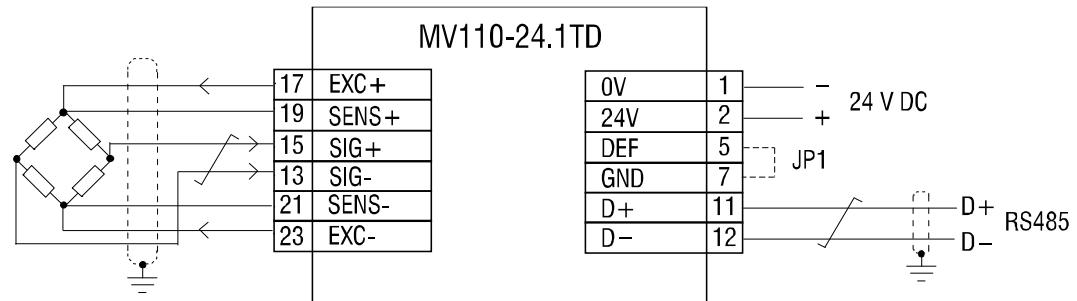

Fig. 5.2 6-wire connection

## Configuration

### 6 Configuration

► NOTICE

**Before starting**

**Before switching on, make sure that the device was stored at the specified ambient temperature (-10 ... +55 °C) for at least 30 minutes.**

Parameters of the module can be read, edited and saved with “M110 Configurator” software (on the CD included). The full list of parameters is shown in the Table 6.1.

To control the module via Modbus network refer to Appendix B “Modbus addressing”

The module should be configured first before operating in RS485 network.

Proceed as follows:

- install M110 Configurator on the PC
- connect the module to the USB interface of the PC over RS485-USB interface adapter IC4 (not included)
- connect the power supply to the terminals 24V / 0V
- turn on the device
- start the M110 Configurator.

If the factory settings of the module have not been changed, the connection to the module is automatically established, the module automatically recognized, its configuration parameters read out and an appropriate configuration mask open.

If it does not happen, parameters of the configurator should be changed.

Table 6.1 Configuration parameters

Name	Parameter	Valid value	Meaning	Default setting	Access
<b>Basic parameters</b>					
<b>dev</b>	Device	Up to 8 symbols			R
<b>ver</b>	Firmware	Up to 5 symbols			R
<b>tdev</b>	Number of channels	0	1 channel		R

		1	2		
<b>Len</b>	Data bits *	0	7	8	R/W
		1	8		
<b>A.Len</b>	Address bits	0	8	8	R/W
		1	11		
<b>Addr</b>	Device address	1...247		16	R/W
<b>Rs.dL</b>	Response delay, ms	0...255		2	R/W

## Configuration

Channel					
Ch.St	Channel status	0	OFF	ON	R/W
		1	ON		
Cnt.P	Tare zero offset	0	ON	OFF	R/W
		1	OFF		
Sens	Strain gauge rated output	0	± 1 mV/V	± 2 mV/V	R/W
		1	± 2 mV/V		
		2	± 4 mV/V		
		3	± 8 mV/V		
		4	± 16 mV/V		
		5	± 32 mV/V		
		6	± 64 mV/V		
v.Min	Lower limit	FLOAT (-5x10 <sup>9</sup> ...5x10 <sup>9</sup> )		0	R/W
v.Max	Upper limit	FLOAT (-5x10 <sup>9</sup> ...5x10 <sup>9</sup> )		100	R/W
P.Wgh	Tare weight	FLOAT (-5x10 <sup>9</sup> ...5x10 <sup>9</sup> )		0	R/W
P.Cnt	Tare weight multiplying	USHORT (1...65535)		1	R/W
E.Rg m	Excitation voltage	0	DC	DC	R/W
		1	AC		
MAv.L	Output filter length	0...100			R/W
Set.F	Sampling frequency	selection list			R/W
Input polling					
Rd.fV	Measured value, mV				R
Rd.fF	Measured value, units				R
Rd.pF	Measured value, %				R
Rd.St	Status	see Table B2			R

\* Invalid network parameter combinations:

- prty=0; sbit=0; len=0
- prty=1; sbit=1; len=1
- prty=2; sbit=1; len=1

## Operation

### 7 Operation

#### 7.1 Measurement range

The measurement range is defined by the strain gauge rated output (Table 2.2). The default value is -7.5...7.5 mV, which corresponds to the rated output of 2 mV/V.

#### 7.2 Measured value

The measured value in a floating-point format is in different units available (see Table 6.1):

- in mV (parameter **Rd.fV**)
- in % (parameter **Rd.fF**)
- in physical units (parameter **Rd.pF**), using the parameters “Lower limit” (**v.Min**) and “Upper limit” (**v.Max**) for scaling

#### 7.3 Excitation voltage

AC or DC excitation voltage for the resistor bridge can be selected (see Table 6.1, parameter **E.Rgm**).

- DC (default): 2,5 V DC voltage applied on the terminals EXC+ / EXC-
- AC: 2.5 V DC voltage applied on the terminals EXC+ / EXC- changes its polarity with each measurement. This compensates any zero voltage drift of the bridge.

Note: The type of a strain gauge should permit the excitation voltage polarity reversal.

#### 7.4 Tare zero offset

The function enables to calculate the net weight from gross weight (strain gauge output voltage) in accordance with the fixed tare weight and the number of containers. Set the parameter “Tare zero offset” (**Cnt.P**) to ON to use the function.

##### 7.4.1 Tare weight

Set the parameter “Tare weight” (**P.Wgh**) to the measured tare weight (Table 6.1) or use the menu path “*Tools>Tare weight*” to use the current weight as a tare weight.

##### 7.4.2 Tare weight multiplying

If many containers are used, set the parameter “Tare weight multiplying” (**P.Cnt**) to the number of containers (see Figure 4.2).

##### Example:

When three containers each 5 kg are weighed, set the parameters as follows:

- “Tare weight” – 5
- “Tare weight multiplying” – 3

## Restore factory settings

### 8 Restore factory settings

If the communication between the module and PC cannot be established and network parameters of the module are unknown, the default network settings should be restored.

Proceed as follows:

- turn off the module
- set the jumper JP1 between terminals DEF and GND (see Table 5.1, Fig. 5.1-5.2)
- turn on the device
- the device is reset to the factory settings and the user settings are saved
- connect the module to PC
- start the M110 Configurator
- click the “*Use factory settings*” key in the “*Connection to device*” dialog window or enter the values from the Table 7.1 (see Fig. 7.1)

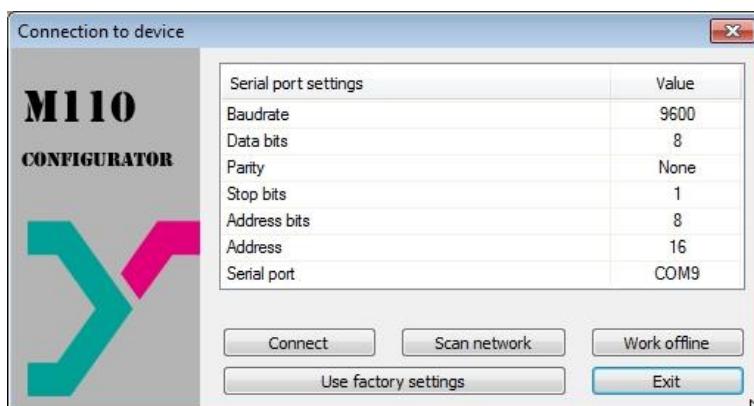

Fig. 7.1 “Connection to device” dialog window

- click “Connect” to establish the connection with factory settings
- The main window with the device mask opens. Use the “Device>Read all” menu path to read the user network settings from the device (see Fig. 7.2).
- open the “Network parameters” folder and note the user network parameters

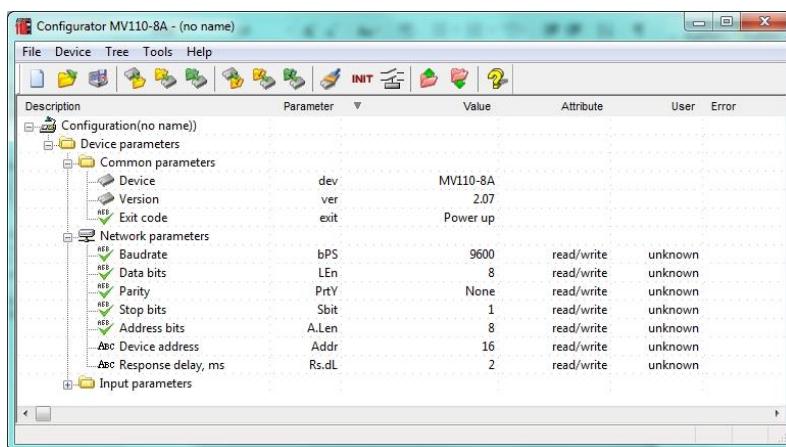

Fig. 7.2 M110 Configurator main window

- close the M110 Configurator
- turn off the module
- remove the jumper JP1 between terminals DEF and GND
- turn on the module again
- start the M110 Configurator
- enter the noted network settings in the “*Connection to device*” dialog window

## Restore factory settings

- click “Connect”
- Use the menu path “Device> Check connection ...” to check the connection to the device

Table 7.1 Factory settings for network parameters

Parameter	Name	Factory setting
Baud rate, bit/s	<b>bps</b>	9600
Data bits	<b>len</b>	8
Parity	<b>pqty</b>	none
Stop bits	<b>sbit</b>	1
Address bits	<b>a.len</b>	8
Address	<b>addr</b>	16
Response delay, ms	<b>rs.dl</b>	2

## Maintenance

### 9 Maintenance

The maintenance includes:

- cleaning of the housing and terminal blocks from dust, dirt and debris
- checking the fastening of the device
- checking the wiring (connecting leads, fastenings, mechanical damage).

The device should be cleaned with a damp cloth only. No abrasives or solvent-containing cleaners may be used. The safety information in section 3 must be observed when carrying out maintenance.

## Transportation and storage

### 10 Transportation and storage

Pack the device in such a way as to protect it reliably against impact for storage and transportation. The original packaging provides optimum protection.

If the device is not taken immediately after delivery into operation, it must be carefully stored at a protected location. The device should not be stored in an atmosphere with chemically active substances.

Permitted storage temperature: -25...+55 °C

***Transport damage, completeness***

***The device may have been damaged during transportation.***

***Check the device for transport damage and completeness!***

***Report the transport damage immediately to the shipper and akYtec GmbH!***

## Appendix B Modbus addressing

### Appendix B Modbus addressing

In the operation mode the module is controlled by a network Master. The addresses from 1 to 247 can be used. The address 0 is reserved for broadcasting.

The following Modbus functions are supported:

- 03 (0x03) Read Holding Registers
- 04 (0x04) Read Input Registers
- 06 (0x06) Preset Single Register
- 16 (0x10) Preset Multiple Registers
- 17 (0x11) Report Slave ID

*Table B.1 Modbus registers*

## Appendix C Calibration

### Appendix C Calibration

Two kinds of calibration are available:

- user calibration provides precision scaling of the measured value
- factory calibration

#### ► NOTICE

***Factory calibration may be performed only by the manufacturer***

For user calibration proceed as follows:

1. Connect the strain gauge to the device
2. Turn on the device
3. Start the “M110 Configurator” software
4. Establish the connection to the device via RS485 interface (see section 6 “Configuration”)
5. Wait for 20 minutes to warm up the device
6. Use the menu path “Tools > Calibration...”
7. Enter the access code 792 in the appeared dialog window and click “Next”
8. Select “User” as a kind of calibration and click “Next”
9. Select two points within the scaling range (from “Lower limit” to “Upper limit”) with the maximum spacing between for the calibration
10. Apply the lower selected load to the strain gauge and enter its value in physical units into the field “Lower calibration point (units)” and in percent into the field “Lower calibration point (%). Click “Next”
11. Apply the upper selected load to the strain gauge and enter its value in physical units into the field “Upper calibration point (units)” and in percent into the field “Upper calibration point (%). Click “Next”
12. Click "Save" after completing the calibration

#### Example:

The set measuring range:

- |                 |           |
|-----------------|-----------|
| – “Lower limit” | 0 (kg)    |
| – “Upper limit” | 1000 (kg) |

If 50 kg and 900 kg calibration points are selected, the calibration should be performed with following settings:

- |                                     |          |
|-------------------------------------|----------|
| – “Lower calibration point (units)” | 50 (kg)  |
| – “Lower calibration point (%)"     | 5 (%)    |
| – “Upper calibration point (units)” | 900 (kg) |
| – “Upper calibration point (%)"     | 90 (%)   |
